

Saffron for Mental Health Conditions

Summary: Saffron is an expensive and popular spice used in many types of cuisine such as Middle Eastern cuisine. There is promising data from studies that suggest it might be helpful for brain conditions such as depression and attention deficit hyperactivity disorder (ADHD). Nonetheless, more evidence is required before it can be recommended as an evidence-based treatment.

What is Saffron?

Here are some saffron brands. We are providing this for informational purposes only. We cannot endorse any of these brands as with supplements, it is difficult to establish their reliability as compared with prescription medications.
